Introducing New FYH Pillow Block Units

The new FYH original solid base pillow block housings seat better and produce a more stable mounting configuration that significantly reduces vibration.

The support ribs have been eliminated to make more room for mounting bolts and washers, yet these housings are more than 30% stronger than before while also reducing housing weight.

Pillow block structural strength rating comparison (KN)

	A	B	C	E	WT(g)
NEW P205	145	53	52	25	615
OLD P205	108	53	38	19	660

The new pressed seals have an inward facing lip which allows grease to flow back towards the balls and raceway during operation thereby improving lubrication performance and extending bearing life.

The new FYH pressed seal design allows for excellent bearing outer ring roundness which maintains the FYH "J" fitting tolerance with all housings and mounting configurations.

FYH Lithium Bearing Grease

New FYH Lithium Bearing Grease is a perfect match for the specific design considerations of FYH Bearings, and it has been formulated to handle a wide range of operating conditions. FYH Lithium Bearing Grease can be mixed with other brands of FYH grease including Gold 3A lithium soap grease as it will improve performance, corrosion resistance, loading capability, and promote longer bearing life.
