Spartan™ ALUMINUM WORM GEAR DRIVES

Compact, Rugged and Lightweight Alternatives for Design Flexibility

BASIC SPECIFICATIONS

- Power Ratings from 1/4 to 8.2 hp
- Output Torque to 3,900 in-lbs
- Ratios from 7:1 through 4020:1
- Output Speeds 25 rpm to 250 rpm

STANDARD FEATURES

- Vent free design, factory lubricated with premium synthetic PAG460 gear lubricant with an operating temperature range of -25°F to 225°F (-32°C to 104°C)
- Precision machined single-piece aluminum alloy housing designed for light weight with high tensile strength
- Resinol RT (MIL-STD 276) vacuum impregnated housings and caps for protection and sealing
- Alloy shafting for greater strength
- Hardened and ground worm and alloy bronze gear for greater wear life
- Oversized bearings for higher shock and radial load capacity
- Worm-worm and Helical-worm double reduction available

OPTIONAL FEATURES

- Modified Standard and Custom Designs
- Zinc plated steel mounting feet and torque arms
- Long and short output mounting flanges
- Unique or Harsh Environment Adaptations

MOTORIZED WORM GEAR DRIVES

- Motors produced by Marathon Electric for high efficiency, reliability and durability
- General or Definite Purpose Motors
- Brake or inverter duty motors, DC or washdown motors
- Motor/Gear Drive Package Incentives Available, consult factory
- See Section H for Available Motors

Spartan™ up to two-thirds lighter and one-third smaller than comparable cast iron units!

SELECTION INSTRUCTIONS

The ratings for gear drives in this manual are based on a service factor of 1.00, for uniform load and uniform power source, up to 10 hours of operation per day. For other operating conditions, the application horsepower or torque must be multiplied by the appropriate service factor, to determine the equivalent gear drive power rating. A gear drive should be selected with a rated capacity equal to or greater than the equivalent load.

Table 1 designates recommended service factors for various conditions of load, power source, and duration of service.

AGMA Service Factors for Worm and Helical Worm Gearmotors and Reducers are listed in Section A.

Refer to page A-2 for further information and cautions on the selection of proper service factors.

Input Rotation to Hub City Spartan Worm Gear Reducers can be either clockwise or counter-clockwise. Consult factory for operation at input speeds above 1750 rpm.

Maximum momentary or starting torque is limited to 300% of rated capacity.

* UNSPECIFIED SERVICE FACTORS SHOULD BE 1.0 OR AS AGREED UPON BY USER AND MANUFACTURER.

EXPLANATORY NOTES

1. Time specified for intermittent and occasional service refers to total operating time per day.
2. Term "frequent starts and stops" refers to more than 10 starts per hour.

DESCRIPTIONS FOR ORDERING SPARTAN™ GEAR REDUCERS

To specify a Spartan™ gear reducer, specify the Mounting Style, Unit Size/Series, Ratio, and Output Shaft Style, Hollow or Solid and Motor Input Flange. See pages C-7, C-10 and C-13 for torque ratings. To order motorized reducers, specify the reducer as shown, indicate the motor description and specify “motorized assembly.”
