Pillow Blocks
Spherical Units
Takeups

Jones Bearing Company is a manufacturing and marketing company with plants based in the USA. *Jones* is a part of a group of companies that manufactures and sells mechanical power transmission components and conveyor systems.

Jones has extensive engineering, manufacturing and marketing expertise in the field of mechanical power transmission and conveying equipment. In addition to roller bearing pillow blocks, *Jones* manufactures flange blocks, take ups, elevator boot bearing assemblies, pulley shaft and conveyor shaft assemblies. The past experience gained as a total manufacturer for the power transmission and conveying industries is essential for the development and application of a premier product line for general industry.

Jones

2000 Series Pillow Blocks

- High Quality USA Made Spherical Roller Bearings
- Internal Misalignment
- Triple Labyrinth Seal
- Collar Mounted
- Interchanges with Most Major Brands

Jones

PB1000 Extra Heavy Duty Pillow Blocks

- Heaviest Production Pillow Block
- Dual Tapered Roller Bearings
- All Steel High Temperature Seals
- Adapter Sleeve Mounted
- Highest Load Ratings Available

Contents

Jones is a full-line manufacturer of mounted spherical roller bearings and standard and heavy duty takeups. This catalog includes many of our industry standard designs.

If you cannot find the takeup or bearing unit you require in this catalog, call Jones. We are flexible and will engineer the component you require to meet your most exacting specifications.

NOTES: 1) Dimensions subject to change. Certified dimensions of ordered material furnished on request.
2) 2000 series has single set collar. 5000 series has double set collar.

† Allowable working load is ²/₃ yield strength.

Manufacturers & machine builders sometimes desire to incorporate anti-friction bearing units into the design of their product, using their frame for the bearing support.

The internal unit as used in the takeup block is self-contained and can be used in this manner. The standard spherical ring on the housing allows manufacturers to design around the Jones Spherical Unit.

- NOTES:
- †Dimensions subject to change. Certified dimensions of ordered material furnished on request.
 - *Spherical unit diameters "V" are noted in fractional dimensions to simplify construction work; however, the actual dimension would be held to decimal having the following tolerances:
 - Spherical unit sizes 1⁻¹⁵/₁₆" -7" inclusive will have a "V" dimension of +.000"/-.001".
 - Spherical unit sizes 8" and 9" will have a "V" dimension of +.000"/-.002".
 - Spherical units requiring special shaft sizes not listed in the 'Other Shaft Sizes' column, consult Jones for Engineering Review.

Heavy Duty Center-Pull Takeup Assembly

JHT-2000 / JHT-5000

Jones

- Self-aligning roller bearing

Pillow Block Takeup Frames

Type TFT

Jones

- All-steel frame
- Suitable for severe service
- Fully protected Acme thread adjusting screw
- Mounting for customer-preferred pillow blocks

- NOTES:
- 1) Dimensions subject to change. Certified dimensions of ordered material furnished on request.
 - 2) 200 through 350 frames will accommodate pillow blocks on saddles which are slotted for two-bolt blocks.
 - 3) When using four-bolt blocks or on frames 400 and larger, please specify:
 - Bore size of pillow block
 - Type of block (customer's preference)
 - Whether block is two- or four- bolt style
 - Frame travel
 - 4) Sizes not listed will be priced on applications.
 - 5) Slots for bearing bolts will be supplied at maximum range for specified bearing.

- Hinged or removable top frame
- Protected screw
- Babbitt bearing
- Bronze bearing available
- Relubricatable

- NOTES:
- 1) Specify Non-Expansion or Expansion type Pillow Blocks on all orders.
 - 2) Pillow Blocks are normally supplied with slotted cored base bolt holes unless the order specifically states standard drill holes. See E++ Above
 - 3) Pillow Blocks ordered with drilled base bolt holes will be drilled for the same size bolts shown in the table above and will be located by dimension "E" & "F" as noted above. See symbol ▲ above.
 - 4) Pillow Blocks requiring special shaft sizes not listed in other shaft size columns consult Jones for Engineering review. See † symbol above.

To order, specify Jones 1000 Series & Shaft Size: e.g. 3¹/₁₆ Dia. Specify: PB1000 - 3¹/₁₆

User Benefits

Self Alignment is independent of the roller bearing, occurring between the spherical unit and the pillow block housing. Alignment occurs as the spherical unit pivots or slides in the pillow block housing on the machined spherical ring of the spherical housing. This design maintains gaps or labyrinths between the seals and the housing under all conditions of operation, permitting them to be positively sealed with grease.

The outer housing is a two piece design made of sturdy and generously proportioned cast iron. The housing is designed for heavy duty service utilizing a solid casting with no cored sections in the mounting feet to weaken the bearing support. The cap & base are machined as a matched unit to assure close tolerance and precise fit of the spherical unit in the straight bore (expansion type) or the spherical bore (non-expansion type). The two piece construction permits easy removal of the spherical bearing unit and shaft without changing the alignment position.

The Timken Tapered Roller Bearings are factory sealed in the spherical unit at the time of assembly and need not be disassembled on the jobsite at the time of installation.

The mounting base is solid under the mounting bolts for a rigid support and is generously proportioned so that a dowel pin may be used if necessary. The slotted, cored base bolt holes simplify mounting and permit maximum lateral adjustment. Cored base holes are standard, but drilled base holes (optional) are available if desired.

The hydraulic type grease fitting mounted in a bushing is fully protected from dust, dirt and possible damage by a spring type dust cap.

Expansion Pillow Block

Section through an Expansion Type Pillow Block showing the straight bore in the cap and base. This design is used in the adaptor for bearings with shaft diameters of $1\frac{15}{16}$ " to $3\frac{7}{16}$ " inclusive.

Non-Expansion Pillow Block

Section through a Non-Expansion Type Pillow Block with a spherical bore in the cap and base. This adaptor design with a backing off nut is used for the bearings with shaft diameters of $3\frac{15}{16}$ " to 9" inclusive.

Spherical unit

Section through a spherical unit. Note how the spherical ring will fit in either the straight bore of the expansion type pillow block Housing or in the mating spherical ring bore of the non-expansion type pillow block housing.

Used in either block
